Multi-Site Management

Product

▶ Epicor® ERP

Benefits

▶ Transact across all of your locations and sites around the world for global visibility
▶ Gain regional flexibility by easily connecting cloud and on-premises instances of Epicor ERP
▶ Consolidate financial transactions in a centralized environment
▶ Simplify financial management and enable a corporate-wide financial reporting

Features

▶ Multiple companies, databases, and servers in a single system
▶ Global management of customers, parts, suppliers, and shared warehouses
▶ Costing by plant
▶ Multi-plant scheduling for manufacturing
▶ Intercompany trading transactions for purchases and sales
▶ Consolidated procurement with global supplier price agreements
▶ Centralized payments and collections for strategic partners
▶ Comprehensive global credit management
▶ Multi-company journal entries, views, and dashboards

Optional Modules

▶ Multi-Site Management
▶ Multi-Currency Management
▶ Multiple Books
▶ Epicor ERP Cloud Transaction Consolidation for Multiple Site IDs

Unify Your Global Manufacturing Business

Multiple Locations in a Single System

For manufacturers with more than one location, records of the transactions that occur across the business often get scattered and disorganized. This makes it uniquely challenging to gain the insight you need to address resource requirements, meet customer expectations, and improve profitability.

Achieving these competing goals requires a careful consideration of what, how, when to produce and sell. By optimizing the location of production facilities globally, manufacturing businesses can beat the competition on a local and international level. If a well-thought-out network of production and distribution sites is established, the synergies originating from being closer to customers and distributors make the business more recognizable and profitable in all regions.

With the Multi-Site Management module in Epicor ERP, you can easily manage intercompany activity and get a financial control on all sites in one system. Unique to the Epicor approach, each site may run Epicor ERP in the cloud or on-premises, whichever you prefer, for ultimate business flexibility and regional fit. Easily include any number of servers, databases, cloud data centers, companies, countries, and continents across your sites to truly achieve a unified, borderless, global business.

Function-Rich Multi-Site Management

In a multi-company environment, the individual companies communicate with each other with special, intercompany transactions that can be orders, shipments, invoices, payments and more.

Reap the benefits of managing your parts, suppliers, and customers globally, performing multi-plant scheduling, centralizing collections, managing customer credits for all your sites in a unified system.

Multi-company journal entries, consolidation capabilities makes your financial management and reporting more efficient than ever.

Epicor ERP Cloud Transaction Consolidation for Multiple Site IDs

The Epicor ERP Cloud Transaction Consolidation for Multiple Site IDs is a new optional module that helps Epicor ERP customers to elaborate their cloud strategy, supporting a global roll-out in phases, meeting local legal requirements and improving global visibility and alignment of resources across all their multiple site IDs.

This new capability opens a channel for transactional communication between different Epicor ERP deployment instances, let these be in either different Azure deployment regions, or deployed on-premises with a supported hybrid approach.

On-premises locations need to be on the same Epicor ERP upgrade level (i.e. Epicor ERP 10.2.600) as the cloud, but do not need to be on the same update level (i.e. Epicor ERP 10.2.600.7).

- ► Automation of AP/AR invoices associated with intercompany trading
- ► Consolidated purchasing
- ► Centralized AP
- ► Multi-company journals and AP allocations
- ► Financial book consolidations
- ► Global queries (BAQ)
- ► Enterprise dashboards

Multi-Currency Management and Multiple Books

The Multi-Currency Management and the Multiple Books are two optional modules that complete the Multi-Site Management and support doing business globally.

The Multi-Currency license enables working with many local currencies, using the daily exchange rates to perform a consolidated reporting for your multiple books.

It also allows you to define a currency for price lists, quotations, sales and purchase orders, service contracts, invoices, vouchers, cash receipts, supplier pricing, and more.

The periodic revaluation of outstanding invoices as well as booking the resulting gains and losses is important for financial reporting when currency exchange rates fluctuate heavily.

The Multiple Books license in the same company allows you to perform your accounting in the local legally acknowledged currency, while having another book in the reporting currency for the owners of the business.

Example Transactions

- ► Multi-company general ledger accounts
- ► Multi-company journals
- ► Trade goods between internal companies
- ► Central payments and collections
- ► Global parts, customers, currencies, and suppliers
- ► Global customer credit checking, and customer credit holds
- ► Automation of intercompany sales and purchase orders

Epicor ERP Cloud Regions

Epicor runs Epicor ERP Cloud in Azure datacenters worldwide, including regions within the Americas, Asia Pacific, and Europe.

Epicor ERP Cloud is currently available on Azure datacenters located in the following countries:

- ► Australia
- ► Canada
- ► Germany
- ► Singapore
- ► United Kingdom
- ► United States
